1075g**

**PASGT
1150g**

Weights are for medium sized helmets.

Global Armour understands that the modern soldier and police officer requires the highest level of ballistic protection, but also wants a lightweight solution. This is why we have developed the most extensive range of lightweight Level IIIA helmets in the world.

Each of these helmets will stop a 9mm FMJ and a 44 Magnum SJHP travelling at a velocity of 436m/s (1430 ft/s). They also offer fragmentation resistance of 600m/s; as tested with 22 Caliber, 17 grain Fragment Simulated Projectile, according to STANAG 2920 and US MIL STD 662F. Our helmets have been independently tested in accordance with NIJ 0101.4 (June 2001). Our Quality Management System has also been independently assessed and we have been accorded ISO 9001: 2000 for manufacturing ballistic helmets and body armour.

Global Armour is based in Durban, South Africa and is a leading provider of personal protection products for the military and police around the world. Our current range of products includes: Ballistic Helmets, Body Armour, Armour Plates, Bomb Blankets and Anti-Riot Armour.
